

instantiation:

```
filterByName = new KDAutoCompleteController
view : new MemberAutoCompleteInputView
icon: 'nameicon'
title: 'Search by Name'
name: 'names'
itemClass : MemberAutoCompleteItemView
fetchInputName: 'name'
autoCompleteSource : (args, callback)->
  bongo.api.JAccount.getAutoCompleteData 'profile.fullname', args.name, (err, results)->
    callback results
```

adding to a view:

```
form.addSubView filterByName.getView()
```
